media:scape merges furniture and technology to help teams quickly and easily share information—across the table or across the globe. Just connect a PUCK™ to your laptop or similar mobile device, and touch the number on the PUCK that corresponds to the monitor on which you’d like to display information. With a touch of the PUCK, you and your team can share views on up to four monitors or projectors. Here are the elements of a media:scape setting and how they work together.

Boosting collaboration to help teams excel

- **Laptop**: Enables individuals to send information from their laptop (or similar device) to monitors or projectors that are visible to other meeting participants.
- **Audio Cable**: Allows users to share presentations that include sound.
- **Matrix Switcher**: Directs multiple signals to and from multiple devices.
- **Monitor Control Box**: Concealed behind the monitor, allows monitors to be automatically turned on and off from the matrix switcher.
- **Breakout Cables**: Split a single monitor cable into separate audio and video cables for monitors and an IR cable for Monitor Control Boxes (optional IR emitter not shown).
- **Monitor Extension Cable**: Connects the matrix switcher and breakout cable to monitors attached to a media:scape totem.
- **Power Source**: Provides the necessary electrical power for all components.
Meeting participants can share content from their laptop on any of four monitors or projectors by touching the corresponding PUCK icon.

The number of PUCK icons that illuminate always correlates with the number of monitors or projectors connected to media:scape.

Two media:scape settings connected for videoconferencing

Video Camera captures meetings for videoconferences.

Monitors display information shared between remote collaborators through a videoconferencing system.

Internet Connection provides the link to remote sites.

CODEC compresses and decompresses videoconferencing signals sent over the network between sites.

Laptop

Videoconferencing System Remote controls your videoconference and video camera.
